and society

Drivers for growth and conditions for their utilisation

Investments are the drivers for growth

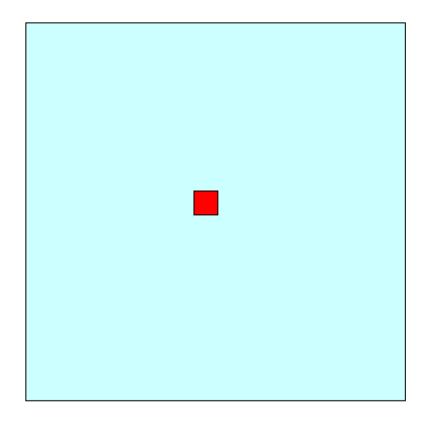

- Education
- Research and development
- Innovations
- Capital

Conditions for the utilisation of drivers for growth

- Opening up of markets
- Flexibility of structures and regulations
- Incentives
 - for the success of innovative companies
 - for private risk investments
- Macroeconomic policies

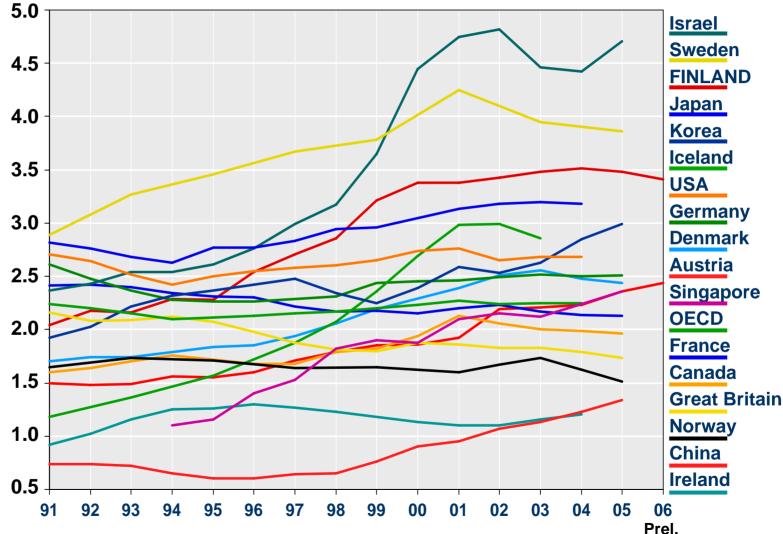

The impact of drivers for growth remain minor without continual structural reform.

Finland in Global R&D

--> there is an apparent need for a specific small country strategy...

Turnover in industry and knowledge intensive services

Turnover, billion euros

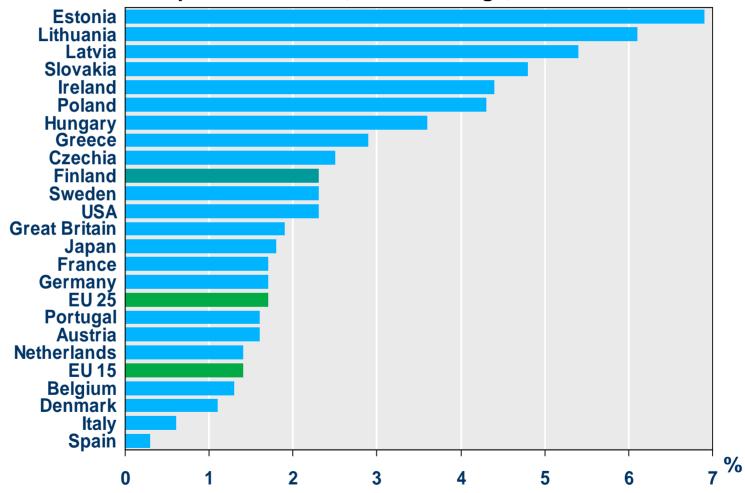

R&D investments in the high tech and mid-technology sectors are at least 2 per cent, in other industries less than 2 per cent of turnover. Knowledge intensive services include banking and insurance services, postal services and telecommunications, leasing of equipment, R&D, information technology and other business services and education, health and social services.

Science Parks Progress

- 1982 First Finnish science park
- 1985 Premises for enterprises near universities, incubators
- 1988> Finnish Science Park Association TEKEL
- 1990 Commercialising research-based business ideas
- 1994 > Centre of Expertise Programme
- 1995 > Developing regional clusters, specialized services
- 2000 > Internationalisation

Strategic Centres for Science, Technology and Innovation

DM 249834 12-2006 Copyright © Tekes

What?

Strategic Centres for Science, Technology and Innovation will provide a new way of coordinating dispersed research

resources

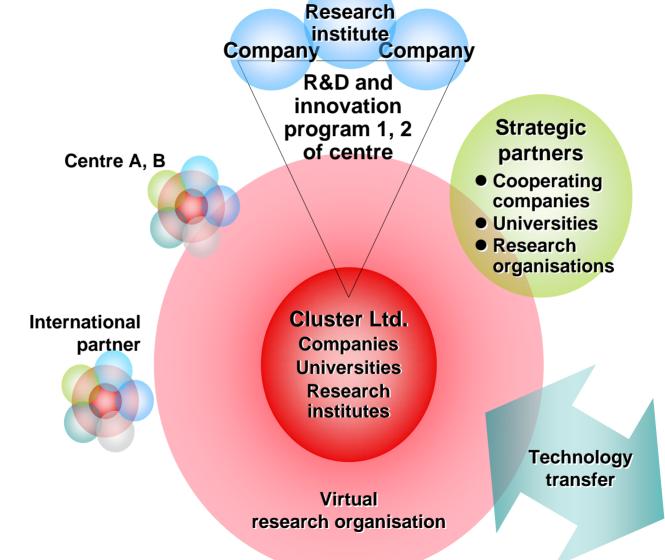

to meet targets important for Finnish business and society.

In the strategic centres:Companies, universities and research institutes will

agree on a joint research plan. The plan will aim to meet the application needs for practical application by companies within a 5-10-year period.

 In addition to shareholders, public funding organisations will commit themselves to providing funding for the centres in the long term.

Strategic Centres for Science, Technology and Innovation

DM 249834 12-2006 Copyright © Tekes

Why?

- Research, development and innovation, and funding for them, have taken place mostly as fragmented short-term projects
- International exposure has only been managed by a handful of organizations and individual top researchers
- A new approach is needed to strengthen areas of research and technology that are important to Finland and to create new areas of national competence.

How will the centres help companies?

At the centres, companies will be able to

- Improve the speed and effectiveness of their innovative activities
- Participate in determining a research plan for the centre so that it meets their needs
- Harness diverse know-how necessary for meeting their targets
- Obtain longer-term public research and development funding than is currently available

How will the centres support universities and research institutions?

At the centres, universities and research institutions will be able to

- Participate in long-term strategic research and development
- Network with other scientific top researchers in their field
- Create and strengthen contacts with businesses and researchers in them
- Improve both the qualitative and quantitative operational preconditions of their high-level research teams

Five centres in the first phase

- In the first phase, centres will be established, as decided by the Science and Technology Policy Council of Finland, for the following areas: Energy and environment
 - Metal products and mechanical engineering
 - Forest cluster
 - Health and well-being

- Information and communication industry and services
- •Any proposals concerning other possible centres will be made by a management group set up by the Ministry of Trade and Industry

Thank you!
